Humanoid Robot

Global robotics race accelerating: What we learned from our Beijing tour, robotics webinar, Tesla event and M+ Forum

The past month has marked a pivotal phase for the humanoid robotics sector, with a series of high-profile events and rapid developments underscoring the industry's transition from concept to scaled deployment. The Beijing robotics and auto tour, held jointly with the auto show over 22-24 April, provided a first-hand look at the latest pilot deployments and commercialization progress among China's Beijing-based leading OEMs and component suppliers. The J.P. Morgan Robotics Opportunities webinar on 16 April drew very high attendance from global investors and industry participants, reflecting the sector's growing relevance and the breadth of interest across Asia and the US. The session highlighted the acceleration of humanoid and industrial robotics adoption, the convergence of high-precision hardware and real-time AI, and the emergence of new business models around data, software and recurring services. The M+ Forum in Malaysia, hosted by Yen Voo on 21-22 April, featured a panel with Work E Robotics (Unitree's authorized Malaysia partner) and provided valuable insights into early commercial adoption and evolving business models in ASEAN, with particular focus on operational resilience and solution integration.

On the global stage, Tesla's \$25B capital allocation for AI, robotics and chipmaking is a clear signal of its ambition to become a physical AI company, with the Optimus humanoid robot program at the center of its long-term strategy. The company (covered by the Head of J.P. Morgan's U.S. Autos & Auto Parts team, Ryan Brinkman) is preparing to launch Optimus production in Fremont this summer, with a second factory in Texas planned for 2027, but we see it as playing catch-up to faster-moving Chinese rivals and Boston Dynamics, which is preparing to ship Atlas robots for Hyundai's industrial use. While Tesla's core EV business faces intensifying competition and margin pressure, the company is keenly focused on AI and robotics, investing heavily in proprietary chips and vertically integrated manufacturing. Meanwhile, China's leading OEMs are moving rapidly from pilot to scaled deployment, leveraging strong government support, a robust supply chain and aggressive iteration in both hardware and AI. Boston Dynamics, under Hyundai, is leveraging its legacy in motion control and industrial integration to target high-value, mission-critical applications, but faces pressure from lower-cost, faster-scaling Chinese OEMs. The US market remains in the early stages of humanoid adoption, but automation density is rising and the supply chain is diversifying, with actuation and motion components representing a multi-billion-dollar TAM, in our view.

Stock view: We remain constructive on the sector's long-term opportunity, but see a widening gap between "winners" and "long-tail" players. Investors are increasingly focused on evidence of real-world scale, recurring orders and the ability to move beyond pilot projects to sustainable, high-margin business models. Capital is concentrating in profitable, scale-ready platforms and in suppliers of high-quality components and "brains" (AI/software). We see Leader Drive, Sanhua Intelligent, Minth, Hengli Hydraulic, UBTECH and Hyundai Motor as well positioned to capture the next leg of growth. The market is rewarding

companies with strong commercialization momentum, robust order books and differentiated technology, while laggards and smaller OEMs face tougher funding and competitive environments. The sector's upcycle, driven by automation, AI and robotics, remains firmly in place for 2026 and beyond, with the rapid expansion of use cases and the scale-up of production likely to drive margin improvement and sector re-rating as adoption accelerates, in our view.

Key takeaways from Beijing robotics and auto tour (22-24 April) highlight rapid shift from POC to scaled pilots and centrality of deployment readiness

The Beijing robotics and auto tour, held in conjunction with the auto show over 22-24 April, was well attended by both investors and industry participants, reflecting the high level of market interest in China's humanoid and automation ecosystem. The itinerary included site visits and management meetings with a range of leading robotics and automation companies, as well as key component suppliers specializing in dexterous hands and actuators. The tour provided a first-hand look at the latest pilot deployments and commercialization progress, with a notably more commercial atmosphere than in previous years. Customers and partners were focused on scaling pilots and moving toward real-world usage, underscoring the sector's transition from concept to practical deployment.

- **The near-term outlook for 2026 points to a much faster conversion from proof-of-concept (POC) to scaled pilot deployments, especially in logistics and manufacturing scenarios that are relatively structured.** The most visible ramp drivers are sorting and warehouse workflows, where flexibility is needed for non-standard orders and assembly or loading/unloading tasks in repetitive, constrained manufacturing cells. Our discussions suggest that volume growth will be gated less by prototype capability and more by deployment readiness—reliability, maintenance, consistency and integration time are now the main bottlenecks. The “last-10cm” challenge—scaling from demo to robust, real-world use—remains central. A dexterous hand supplier we met expects its shipment volume to double again in 2026, building on over 10,000 units in 2025, which provides a useful baseline for how quickly commercial usage is moving from data collection and showroom demand into real deployments.
- **Physical intelligence development is now at the center of industry focus for 2026, as embodied AI advancement is the key bottleneck for real-world commercialization.** The “brains-first” strategy is increasingly the core axis of differentiation, with world foundation models and VLA (vision-language-action) models seen (by the companies we visited) as the most promising paths to the endgame for embodied AI. The VLA model is central to action execution—mapping language and video understanding to robot actions—while the world model is for reasoning, planning and “understanding” the environment. The simulation-to-real gap is a widely discussed challenge. One leading humanoid company we visited is using a “control world” tool and a data infrastructure layer to relieve real-scene data bottlenecks, especially for force, friction and tactile realism, arguing that learning efficiency and sim-to-real transfer will be the key unlocks for scaling beyond short-horizon tasks.
- **Commercial traction today is driven more by “solutions plus data collection” than by pure ROI-led labor replacement.** The most tangible humanoid deployments are in logistics sorting and structured manipulation, where customers are already running triple-digit pilots and asking for expansion.

At the same time, a meaningful slice of demand is from large tech and industrial customers using robots primarily to collect data to train their own models. For robot OEMs, this means commercialization models are evolving: Some are selling the “brain” bundled with the body, some are selling hardware only, and others are providing SDK/hardware-only options for customers that want to develop their own intelligence.

- **Dexterous hands remain the near-term bottleneck, and value is accruing to suppliers that can mass-produce with consistency under harsh conditions.** Hand component suppliers emphasized that the sector’s challenge has shifted from “can it work” to “can it scale” across temperature, vibration, corrosion and durability. As robot OEMs move from conceptual stage to mass production, and from showroom demand to real-world usage and data center build-outs, stability requirements are rising sharply, supporting repeat-order behavior once end use cases mature.
- **Capital-raising activity is likely to remain elevated into 2026, but with a widening gap between “winners” and “long-tail” funding access.** Our channel checks suggest early 2026 remains active for primary fundraising, with valuation levels being pushed up and a shift toward a more “capitalization” phase. However, capital is increasingly concentrated: Investors prefer to anchor in profitable, scale-ready platforms and selectively add positions in higher-quality components and “brains” exposure. Smaller OEMs may find it harder to raise, given the capex intensity of VLA-scale training, data acquisition and manufacturing ramp. This sets up a more selective funding environment and raises the probability of partnerships, consolidation and structured financing as the ecosystem matures.

Robotics webinar provided a sophisticated, cross-market perspective on evolving global humanoid and automation landscape

The Robotics Opportunities webinar, held on 16 April and attended by Karen Li, Tomohiko Sano and Sonny Lee, drew very high attendance from global investors and industry participants, underscoring the sector’s growing relevance and the breadth of interest across Asia and the US. The session focused on the rapid acceleration of humanoid and industrial robotics adoption, the convergence of high-precision hardware and real-time AI, and the emergence of new business models around data, software and recurring services.

- **The discussion highlighted that China’s humanoid robotics sector has moved from research and pilot projects to real-world deployment and mass production at an unprecedented pace.** Since late 2023 and especially through 2024, the market shifted from small-batch trials to genuine commercial orders, with leading OEMs now shipping thousands of units per year. The ecosystem is increasingly diverse, with players like Unitree, UBTECH and Agibot each leveraging different business models—ranging from open-source and vertically integrated to software-first and outsourcing-focused. The scale and seriousness of user cases have changed dramatically, with robots now deployed for repetitive manufacturing tasks, logistics and large-scale data collection for AI model training. Order drivers have also shifted, with government procurement and public sector projects now playing a central role, especially as local

governments set up data collection centers and pilot zones. This has resulted in a back-end-loaded order cycle and a major catalyst effect from the IPO pipeline.

- **The US market remains in the early stages of humanoid robot deployment, but is positioned for exponential growth** as automation density rises and applications broaden beyond traditional automotive and electronics into logistics, food and beverage, and construction. The US supply chain for humanoid robots is becoming more diversified, with actuation and motion components representing a multi-billion-dollar TAM by the next decade, in our view. US players are increasingly focused on integrating advanced vision, AI and flexible robotics to enable robots to handle more complex, non-standard tasks and adapt to dynamic environments.
- **A key theme was the shift from hardware-centric automation to integrated solutions that combine advanced vision, AI and flexible robotics.** The next wave of robotics is expected to be defined by the convergence of high-precision hardware, real-time AI control and scalable software platforms. The importance of IP leadership was also emphasized, with innovation increasingly coming not just from OEMs, but from end users and the supply chain, as evidenced by the sharp rise in patent activity and the emergence of new business models around data, software and recurring services.
- **The session also addressed Korea's growing role in the global robotics landscape, with particular attention to Boston Dynamics and its integration with Hyundai/Kia.** Boston Dynamics is preparing for broader industrial deployment of its Atlas humanoid robot, with initial applications expected in Hyundai's car plants starting in 2028. The company's focus remains on high-volume, repetitive tasks in structured environments, leveraging its legacy in motion control and technical innovation. Korea's robotics ecosystem is increasingly characterized by partnerships between global technology leaders and local industrial champions, with a strong emphasis on scaling production, expanding enterprise use cases and maintaining high standards for reliability and safety. The leadership transition at Boston Dynamics and Hyundai's significant investment in robotics and AI infrastructure were noted as key developments to watch as the competitive landscape continues to evolve.
- **The Q&A session surfaced several sophisticated challenges:** the need for robust deployment standards, the complexity of scaling from pilot to mass adoption, and the evolving regulatory landscape. Panelists noted that successful commercialization will depend on the ability to build data flywheels, continuously iterate AI models and deliver measurable improvements in productivity and flexibility. Investors are increasingly focused on evidence of real-world scale, recurring orders and the ability to move beyond pilot projects to sustainable, high-margin business models.

M+ forum in Malaysia provided valuable insights into Unitree's early commercial adoption and evolving business models in ASEAN

The M+ forum, held in Kuala Lumpur and hosted by Yen Voo and team, featured a panel session with Work E Robotics, the authorized Malaysia partner for Unitree. The event showcased Unitree's humanoid and quadruped robots and drew strong interest from local industry participants. The discussion highlighted that ASEAN industrial robotics is now transitioning from showcase and proof-of-

concept to early commercial deployment, with the adoption curve being benchmarked against the EV sector's trajectory five to seven years ago. Enterprise inquiries have increased in 2026, but the buyer mindset has shifted away from labor-cost arbitrage—less relevant in low-wage ASEAN—toward operational resilience, workforce consistency, 24/7 uptime and safety in hazardous environments.

- **The oil & gas sector has emerged as a leading source of demand, with the Unitree B2 quadruped (IP-rated, c.40kg payload on an 80kg chassis) being considered for high-risk tasks such as gas-leak detection and perimeter surveillance.** Manufacturing is seen as the next likely adopter, with the G1 humanoid (torso on AMR base) targeting plant logistics in controlled ground conditions. While interest is growing, deployments remain lumpy and dominated by proof-of-concept pilots; panelists noted that fleet-scale adoption will likely require another two to three years of solution maturity and further hardware cost declines.
- **Cost considerations are top-of-mind for adopters, with the expectation that hardware will eventually be commoditized as Chinese OEMs continue to drive down BOM costs.** Integration and deployment—such as site mapping and LLM/sensor stitching—are expected to become the main sources of margin and customer stickiness. Work E Robotics management was explicit that “once hardware becomes standard, the solution becomes the key.” Commercial models today are skewed toward outright purchase, but there is growing discussion of Robot-as-a-Service and subscription models, which could unlock broader mid-market adoption by converting capex to opex and lowering the barrier for enterprise customers.

Tesla's latest updates reinforce its strategic pivot toward AI and robotics, with capital allocation and operational focus shifting to Optimus and physical AI

- **Tesla has made clear that its long-term vision is to become a physical AI and robotics company, with humanoid robots and autonomous mobility at the center of its growth strategy.** The company is substantially increasing its capital expenditure, with over \$25B planned for 2026, to accelerate the transformation of its Fremont facility into a large-scale robot factory and build out in-house chipmaking and AI infrastructure. We expect this investment to support the ramp-up of Optimus humanoid robot production, with the Fremont plant targeting a capacity of 1M units per year and a second factory in Texas planned for further scaling.
- **While Tesla's core EV business has faced headwinds from increased competition, a limited model lineup and margin pressure, the company is keenly focused on AI and robotics.** The Optimus program remains a strategic priority, with the V3 design nearly ready for production and initial ramp-up expected in the second half of 2026. Tesla is deliberately holding back on public demonstrations of Optimus 3 to protect its IP and maintain a competitive edge, given the intense scrutiny and rapid imitation from global competitors. The company's approach is to start with simple factory tasks and gradually expand Optimus's skillset, with the expectation that humanoid robots will become a major product line over time.

- **Tesla is also investing heavily in proprietary AI chips, with the AI5 chip set to power both Optimus and the company's data centers.** The company is building a vertically integrated chip fab to ensure supply chain security and enable rapid iteration in AI hardware. The broader strategy is to integrate AI, robotics and energy storage across all business lines, with the goal of building a global fleet of autonomous vehicles, robotaxis and humanoid robots. The company is preparing to expand its robotaxi service to additional cities, but regulatory approval and safety validation remain key hurdles.
- **Management has acknowledged that the initial production ramp for Optimus will be slow, given the complexity of building a new product and supply chain, but expects significant scaling in 2027 and beyond.** The company's battery business remains a key enabler, with ongoing investments in new cell chemistries and manufacturing capacity. Investors are increasingly focused on Tesla's AI and robotics initiatives as the main driver of the company's premium valuation, even as the core EV business faces intensifying competition and operational challenges.

Share price review: YTD and recent performance highlight regional divergence and selective rotation

- **The YTD performance chart shows a stark divergence between Japan/Taiwan and China.** Hiwin Technologies (+51% YTD), AirTac (+46%) and THK (+36%) lead the pack, with the Japan and Taiwan average up 40%. By contrast, most Chinese names are flat to negative YTD, with Sanhua Intelligent-A down 19% and Ningbo Tuopu down 24%. The Chinese IA average is just +3%, lagging the global and regional benchmarks. This underperformance reflects both macro headwinds and investor skepticism about near-term commercialization, but also sets up a potential catch-up trade as fundamentals improve.
- **The one-month performance chart shows a more mixed picture, with some Chinese names rebounding.** AirTac (+42%), Keyence (+28%) and FANUC (+27%) remain strong, but UBTECH (+18%), Leader Drive (+14%) and Sanhua Intelligent-H (+10%) have also posted notable gains. The Chinese IA average is +10% for the month, suggesting that capital is rotating back into select robotics and automation names as risk appetite returns. The market is increasingly selective, rewarding companies with clear commercialization progress, strong order momentum and differentiated technology, while laggards continue to underperform.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to Hyundai Motor Company or related entities.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of Hyundai Motor Company or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: Hyundai Motor Company or related entities.
- **Client/Investment Banking:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as investment banking clients: Hyundai Motor Company or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: Hyundai Motor Company or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: Hyundai Motor Company or related entities.
- **Investment Banking Compensation Received:** J.P. Morgan has received in the past 12 months compensation for investment banking services from Hyundai Motor Company or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from Hyundai Motor Company or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from Hyundai Motor Company or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of Hyundai Motor Company or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Jun 14, 2000. All share prices are as of market close on the previous business day.
Break in coverage Apr 25, 2025 - Aug 04, 2025.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: Li, Karen : COSCO SHIPPING Holdings Co Ltd - A (601919.SS), COSCO SHIPPING Holdings Co Ltd - H (1919.HK), CRRC Corp - A (601766.SS), CRRC Corp - H (1766.HK), Cathay Pacific Airways (0293.HK), China Merchants Port Holdings (0144.HK), Estun Automation - A (002747.SZ), Evergreen Marine (2603.TW), Full Truck Alliance (YMM), Hongfa Technology - A (600885.SS), International Container Terminal Services Inc (ICT.PS), JD Logistics (2618.HK), Jiangsu Hengli Hydraulic - A (601100.SS), Leader Harmonious Drive System Co. (688017.SS), MTR Corp (0066.HK), Orient Overseas International Limited (OOIL) (0316.HK), S.F. Holding - A (002352.SZ), S.F. J.P. Morgan Equity Research Ratings Distribution, as of April 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	51%	37%	12%
IB clients**	83%	79%	74%
JPMS Equity Research Coverage*	49%	39%	13%
IB clients**	94%	93%	85%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC (“JPMS”) acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries (“J.P. Morgan Private Bank”), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have

investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
